# E-LINE CCR

## ►Introduction

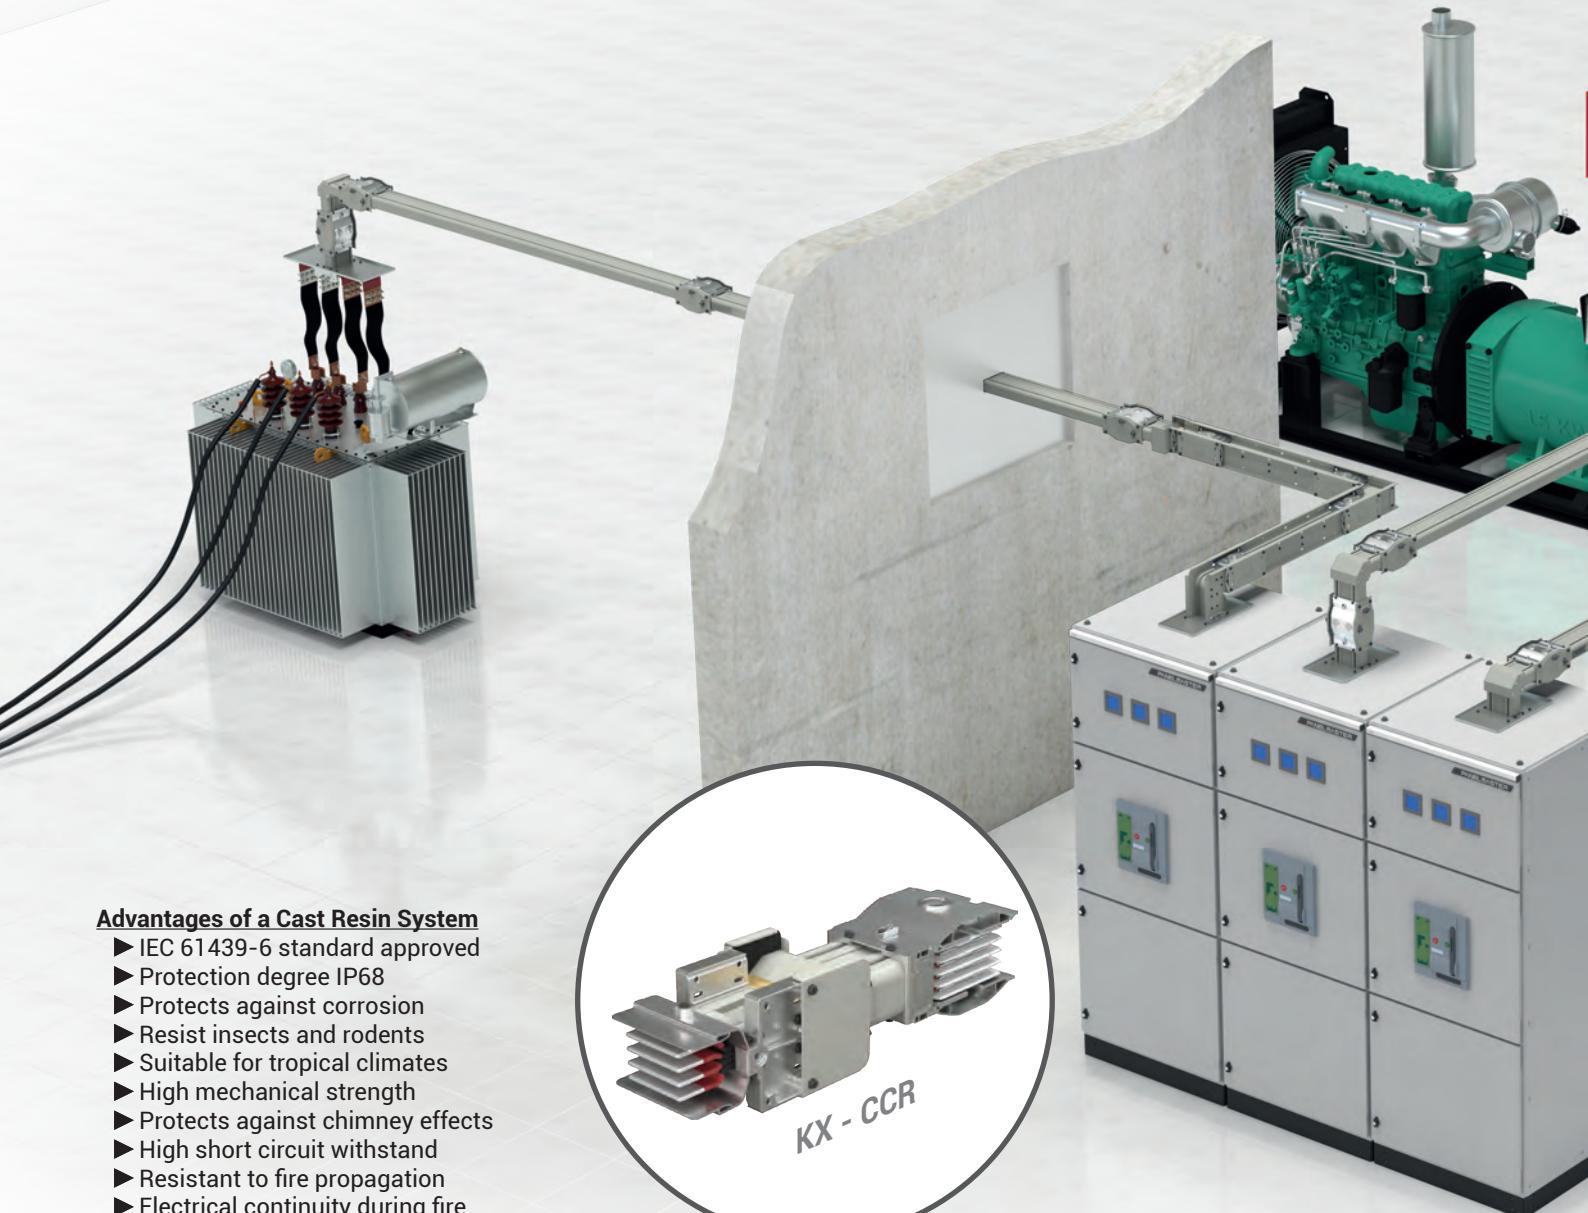

Traditionally, carrying high currents (transformer to switchboards, main distribution lines, power distribution for factories) was achieved using multiples of large cross-section cables in parallel. In order to support these cables in the buildings, there were used a lot of cable trays, cable ladders, under-floor cable channels, etc.

Using "Cast Resin Busbars" in outdoor environments, gallery transitions, chemical plants, harbour applications, tunnels instead of cables that are applied as mandatory offers many advantages.

### Safe and Easy Installation

Detachable IP 68 Ext.

Due to alignment piece on the joint point, block joint element and busbar tray are aligned. This makes installation easier and correct on the right axes.

### Advantages of a Cast Resin System

- IEC 61439-6 standard approved
- Protection degree IP68
- Protects against corrosion
- Resist insects and rodents
- Suitable for tropical climates
- High mechanical strength
- Protects against chimney effects
- High short circuit withstand
- Resistant to fire propagation
- Electrical continuity during fire
- Suitable to connect with E-Line KX busbar systems
- Voltage layout advantage thanks to its compact structure

\*Special components can be manufactured quickly.

# E-LINE CCR

## High IP Isolation

Aluminium body over the IP 68 "DUROCOMP" composite material that is made by specially selected pure silicon minerals and epoxy resin and has high temperature and mechanical operation features protects E-LINE CCR busbar from external elements.

## Effective Heat Dissipation

Heat accumulated in conductors are transferred into the environment through the aluminium body thanks to the additives with high heat transfer rate used in the system. (Figure 1)

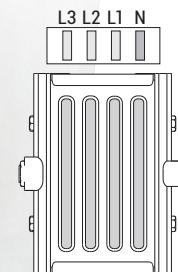

Figure 1

## Short Circuit Withstand

High mechanical and thermal resistance within aluminium body thanks to DUROCOMP material.

## One Bolt Joint Ensures Safety and Easy Installation

E-Line CRR Busbars are installed by tightening the "one bolt joint". Belleville spring washers on both ends of the bolt retains the original contact pressure, ensuring a more secure, reliable and maintenance - free joint.

\*The bolt is tightened to 83Nm (60 lbft)

## Fire and Earthquake Resistance

- 3 hours Electrical Continuity under Fire as per IEC 60331-1
- 2 hours current continuity according to BS 8602 standard
- Seismic Resistance as per IEC 60068-3-3 / 60068-2-57 and IEEE 693

## EX - Protected

- ATEX as per EN 60079-0:2009, EN 60079-18:2009, EN60079-31:2009

II 2G Ex mb IIC Gb  
II 2D IIIC Db

**When using the E-Line CCR to create an electrical distribution system, the following criteria should be taken into consideration.**

- The Power of the load to be connected to the system and their locations.
- Utilisation factor (diversity) assay,
- Power and short circuit currents of transformers, System coordination with other distribution systems (heat, steam, water, etc.),
- Determining a route of the E-Line CCR on layout of the designed system,
- Determination of the types of supports according to plan,
- If necessary, the system can be integrated with E-Line KX busbar system.

### Rated Current

The rating of the busbar current required is calculated using the formula shown below.

$$I_B = \frac{P\alpha}{\sqrt{3}U\cos\varphi}$$

$I_B$  = Operation current (A)

P = Total power load (W)

$\alpha$  = Utilisation factor (diversity)

U = Supply voltage (V)

- The busbar current rating is chosen as being equal to, or greater than the calculated current ( $I_B$ ).
- After calculating the volt drop, if the current rating is not adequate, then a higher rating should be chosen.

### Utilisation Factor (Diversity)

The utilisation factor (a) depends on the type and number of loads. Most are 0.7 or less. Intense Lighting and Motor Fed Lines "0,6" is quite difficult to rise above. Even at automobile welding plants it could fall down to "0,30". With only one single and large load can it go up to "1".

### Voltage Drop

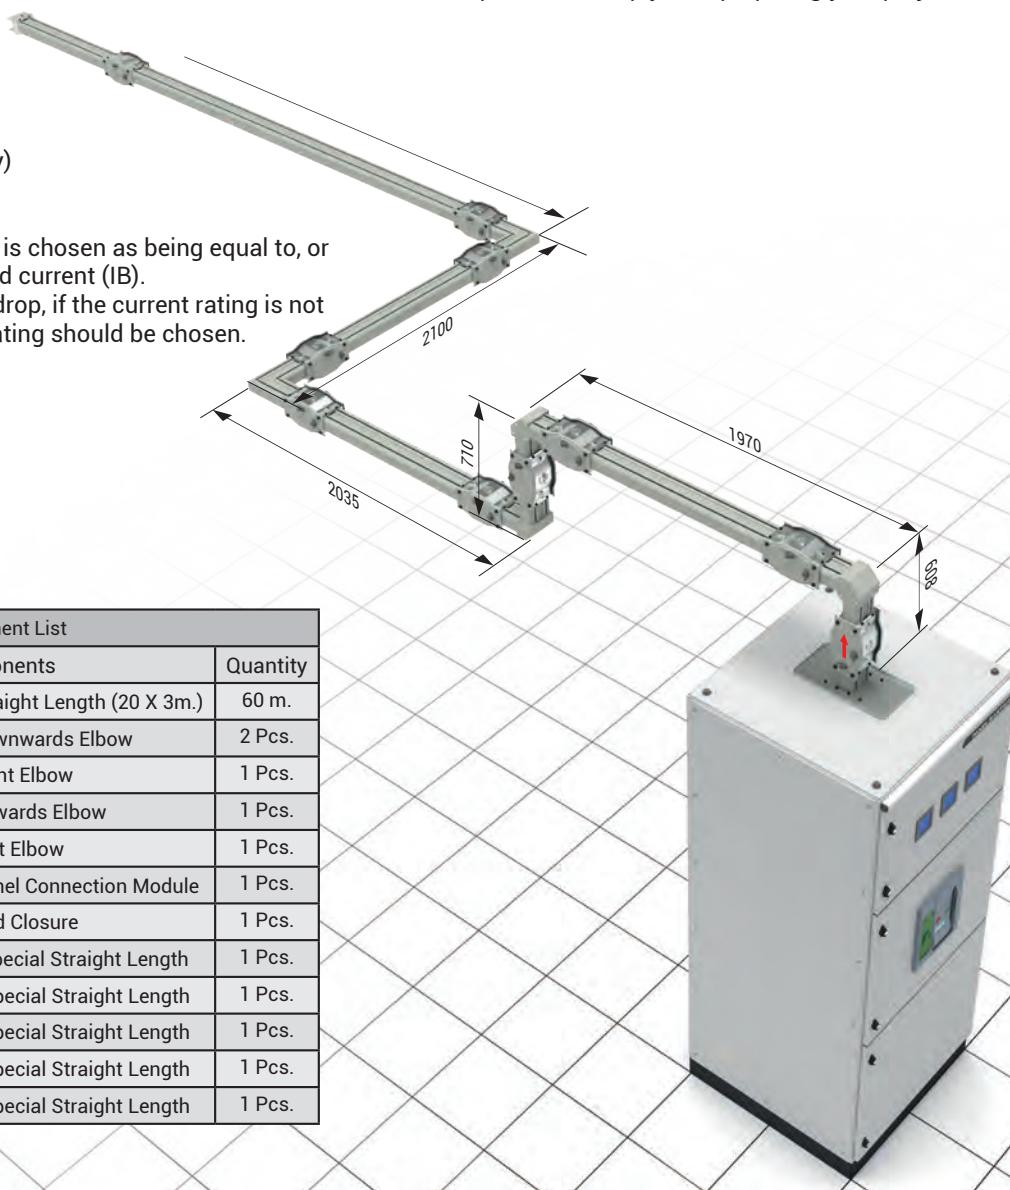

All the required values for voltage Drop Calculations, formulas, basic calculations for simple cases the tables are given on pages 6-9. Further support can be obtained from our Design Department.

### Short Circuit Values

Short circuit test values are given on the tables on pages 6-9. The short circuit values highlight the high short circuit withstand characteristic of the E-Line CCR.

### Busbar Installation Plan

Shown below is an example of an E-Line CCR busbar system. On request, our distributors' project and design departments will be pleased to help you in preparing your project.

# E-LINE CCR

## ►Riser & Vertical Applications

As each building's structure is different, each of the E-Line CCR projects has to be specially designed.

The details on this page briefly explain the information necessary for designing the vertical installation project.

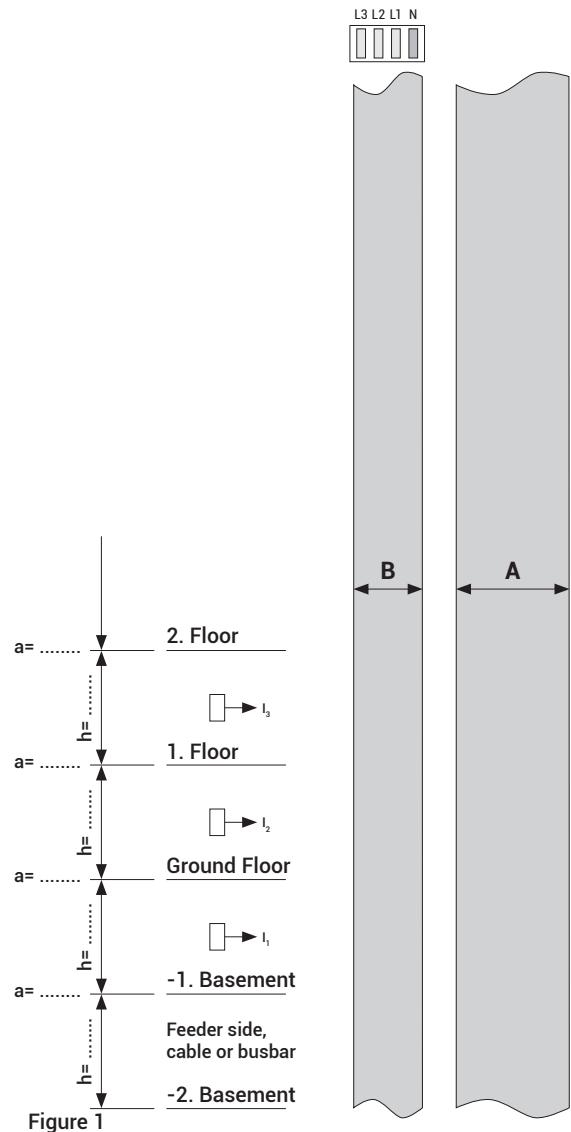

Figure 1

### Pre-Project Design and cost Analysis

Before design and cost analysis can be made, please submit the following information to our Design Department.

Location and Dimensions of the floor penetration where the busbar line will be installed.  
Floor height and Floor thickness ( $h=...$   $a=...$ )  
Vertical line feeding method (by busbar or by cable)

By supplying the above information of the dimensions on a drawing similar to the example in Figure 1 and by faxing or emailing it to us we will be able to produce a quotation.

Please refer to table on page 11 for "A" size.

Number of Conductors	B (mm)
3 Conductors	73
4 Conductors	80
4 ½ Conductors	87

### Voltage Drop Calculation

Generally Voltage drop of a busbar system can be calculated with the following formula.

$$\Delta U = \sqrt{3} \cdot L \cdot I \cdot (R_1 \cdot \cos\phi + X_1 \cdot \sin\phi) \cdot 10^{-3} [V]$$

- $\Delta U$  = Voltage Drop (V)
- L = Line Length (m)
- I = Line Current or Load (A)
- $R_1$  = Resistance ( $m\Omega/m$ )
- $X_1$  = Reactance ( $m\Omega/m$ )
- $\cos\phi$  = Power Factor

S = Supply Point

(1) All phase conductor characteristics have been determined according to Annex BB of IEC 61439-6.

(2) Fault-loop zero-sequences impedances have been determined according to Annex CC of IEC 61439-6.

(3) Fault-loop resistances and reactances have been determined according to Annex DD of IEC 61439-6.

\*IK10 corresponds to impact energy of 50J according to IEC 62262.

\*\* Cast Resin Busbars are produced with a minimum of 3 conductors.

### Voltage Drop Calculation

Generally Voltage drop of a busbar system can be calculated with the following formula.

$$\Delta U = \sqrt{3} \cdot L \cdot I \cdot (R_1 \cdot \cos\phi + X_1 \cdot \sin\phi) \cdot 10^{-3} [V]$$

- $\Delta U$  = Voltage Drop (V)
- L = Line Length (m)
- I = Line Current or Load (A)
- $R_1$  = Resistance ( $m\Omega/m$ )
- $X_1$  = Reactance ( $m\Omega/m$ )
- $\cos\phi$  = Power Factor

S = Supply Point

(1) All phase conductor characteristics have been determined according to Annex BB of IEC 61439-6.

(2) Fault-loop zero-sequences impedances have been determined according to Annex CC of IEC 61439-6.

(3) Fault-loop resistances and reactances have been determined according to Annex DD of IEC 61439-6.

\*IK10 corresponds to impact energy of 50J according to IEC 62262.

\*\* Cast Resin Busbars are produced with a minimum of 3 conductors.

Vertical Expansion Module - DDT

Sample Order:  
**CCRC 32804 - B - DDT**  
3200 A, Copper, Bolt-on,  
IP 68, 4 Conductor

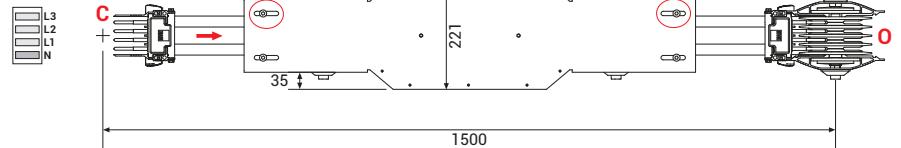

#### DDT Expansion

- Used for vertical applications in multi storey buildings. One vertical expansion unit is advised to be used at every floor between fixed support points.

Horizontal Expansion Module - YDT

#### YDT Horizontal Expansion Module

- It is used as a horizontal expansion element every 40m on a long straight run.

#### Note:

- If the busbar run passes through a horizontal expansion of building, a Dilation Module has to be used.
- Dilation Modules must be used for very long free lines (>75m) that are closed with an end closer and not fixed on the hanger.
- The movement span of Dilation Module is 50mm.

We recommend consulting our company during the project phase.

## ►Fixing Elements

### Ceiling Type Supports

CCR-UT Two-Way For Edgewise Application To NPI Channel

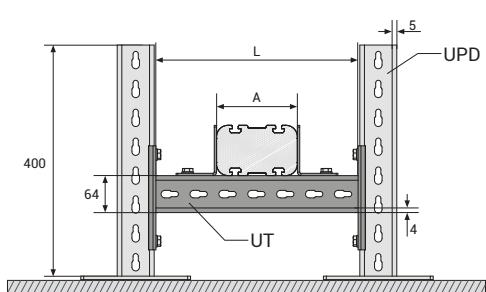

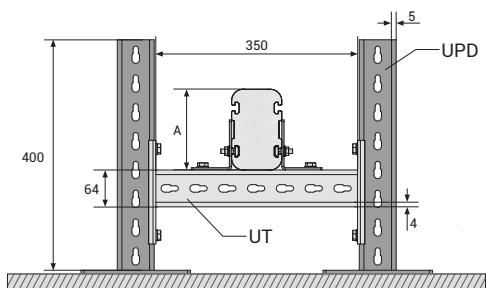

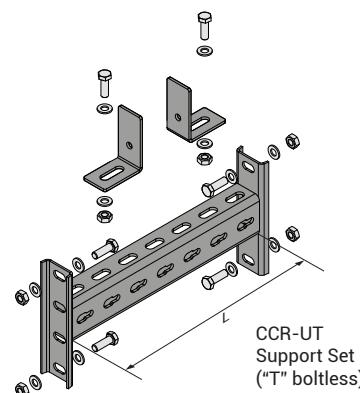

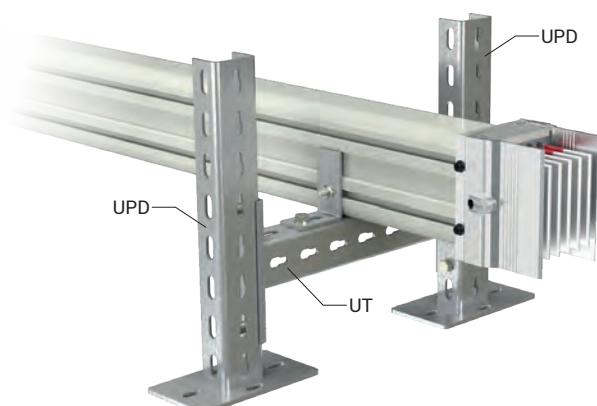

When selecting an UPD product, please keep in mind to select the UPD product suitable to the Busbar A dimension.

When choosing CCR-UT Suspension Set, appropriate CCR-UT Suspension Set should be selected according to Busbar size.

### Floor Type Supports

CCR-UT Two-Way For Edgewise Application To NPI Channel

■ The dimensions given above are minimum values.

■ Please call us for non-standard components.

■ All measures are given in mm.

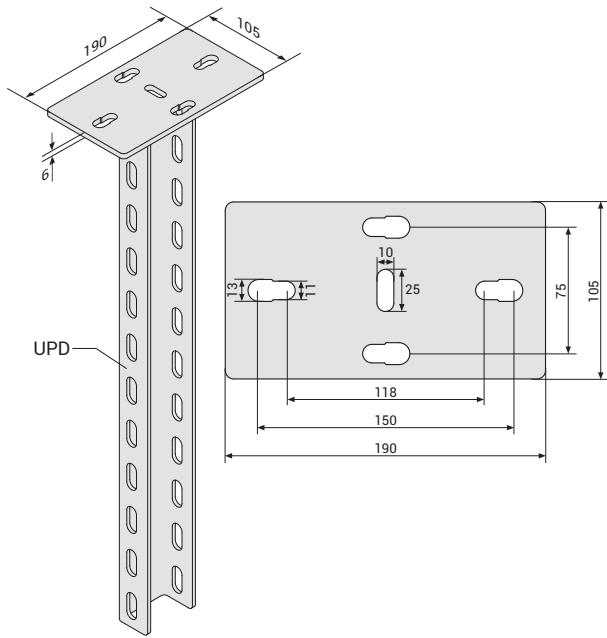

# E-LINE CCR

## ►Fixing Elements

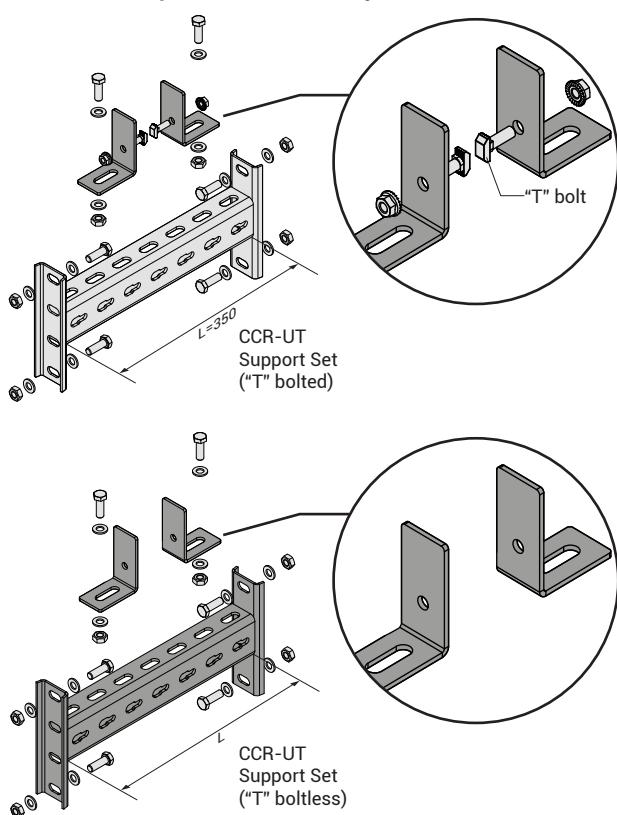

### Heavy Duty Supports (U)

Hot Dip Galvanized After Fabrication (TS EN ISO 1461)

When selecting an UPD product, please keep in mind to select the UPD product suitable to the Busbar A dimension.

### CCR-UT Suspension Assembly

When choosing CCR-UT Suspension Set, appropriate CCR-UT Suspension Set should be selected according to Busbar size.

■ The dimensions given above are minimum values.

■ Please call us for non-standard components.

■ Please check our Suspension Systems (A-A) Catalogue to see our alternative solutions for suspension types.

■ All measures are given in mm.

■ Please call us for non-standard components.

### CCR-L Suspension Set

### CR-L Suspension Connection Set

■ Please check our Suspension Systems (A-A) Catalogue to see our alternative solutions for suspension types.

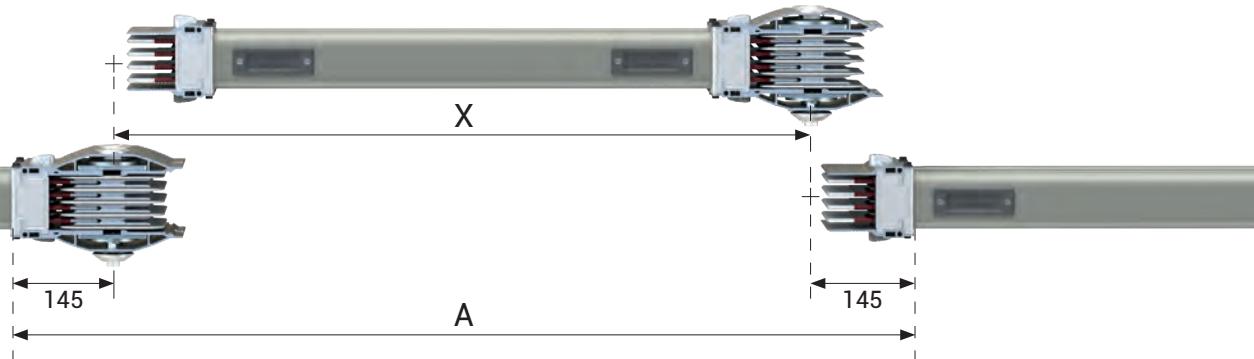

■ All measures are given in mm.

After installation of standard busbar 3m lengths, you will be in need of special lengths which are smaller than 3m. The minimum length for these special elements can be 450mm. Please measure the lengths of these modules as shown below.

Length A is measured between housing of 2 busbars in mm. A. The special length is calculated by deducting 290mm from this measured length.

X = A - 290mm

X = Length of Special Busbar

### ►Preparation of Joint Resin 4

The mèger test must be carried out before casting. If Resin 4 (A) and Resin 4 (B) are stored in a cold environment, they should be kept in a warm environment one day before casting ( $> 20^{\circ}\text{C}$ ).

Ambient temperature during casting should be  $5^{\circ}\text{C} < T \text{ casting} < 35^{\circ}\text{C}$ .

#### Preparation of Resin 4

Add Resin 4 (B) product into Resin 4 (A). One set is 3.5 kg. The required kg values for filling the joints according to their cross-section are indicated in the table next to it. The number of sets to be prepared should be calculated based on the number of joints in the assembly time.

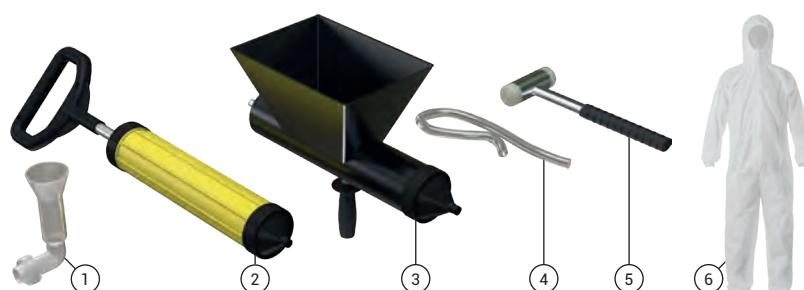

Mix the mixture with a beater at low speed for at least 30sec - 1 minutes until it is homogeneous.

#### Amount of Resin to be Used

# E-LINE CCR

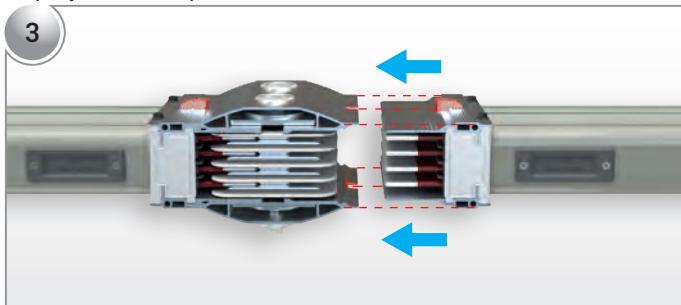

## ► Installation / Flatwise

Unscrew the bolts and remove the busbar protection cover. Properly discard the protective cover after removal.

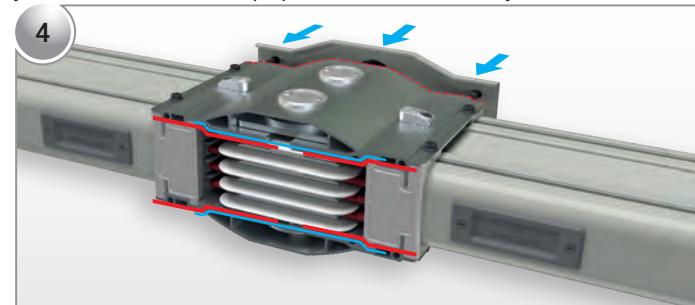

The dust cap bolt is removed and retained for later installation. The block joint bolts are loosened to prepare for installation of adjacent busbar.

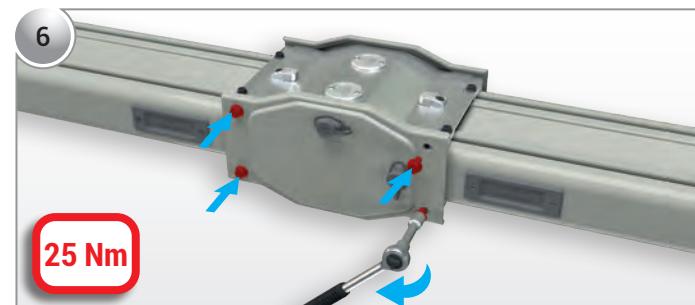

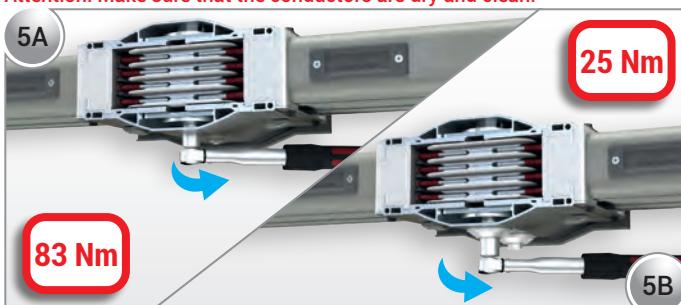

The adjacent busbar is assembled utilizing the alignment pins for correct orientation and alignment of parts.

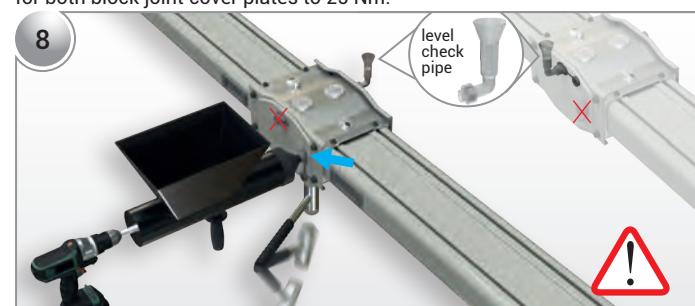

**Attention! Make sure that the conductors are dry and clean!**

Busbar is approach to alignment slots until it is perfectly seated. Adjunct bolts are tightened after checking alignments.

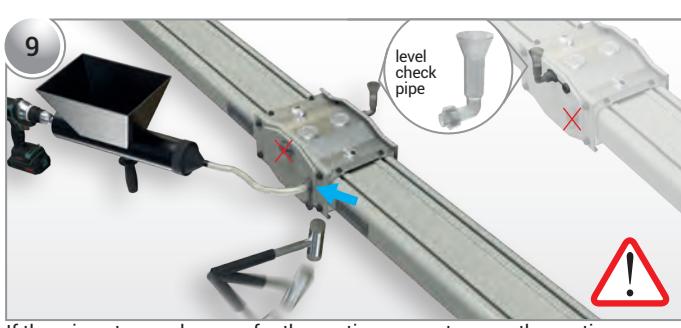

Tighten joint block bolts torque to 83 Nm. Install dust cap bolt and torque to 25 Nm.

The fill port of the shown casting area is opened.

**Attention: Depending on the orientation of the busbar, the filling process is carried out through the shown side plastic cover.**

If there is not enough space for the casting apparatus, use the casting apparatus with transparent hose.

**Attention: Apply vibration with plastic hammer to the joint area to eliminate any air pockets from the pour. Allow for settlement of Resin 4 in the joint.**

Install the level check pipe to opposite upper port. After level pipe is installed, proceed to injecting the Resin 4 into the joint. Continue the filling process until you see Resin 4 present inside the level pipe. If Resin 4 is present in the transparent pipe and no settlement is observed, that is an indication the joint is full and caps can be closed at this time.

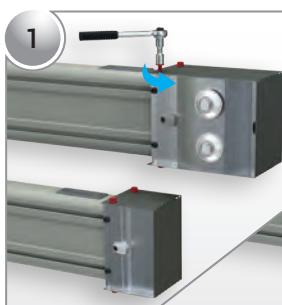

**Attention: Apply vibration with plastic hammer to the joint area to eliminate any air pockets from the pour. Allow for settlement of Resin 4 in the joint.**

Once the injection is done, plastic fill port is closed and installation is completed.

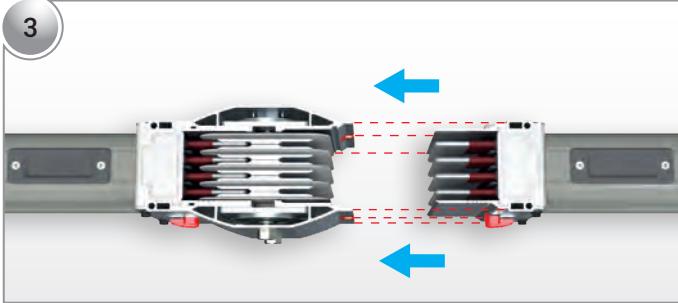

# E-LINE CCR

## ► Installation / Edgewise

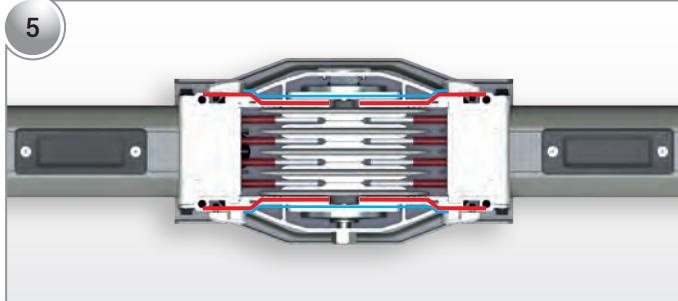

1  
Unscrew the bolts and remove the busbar protection cover.

Properly discard the protective cover after removal.

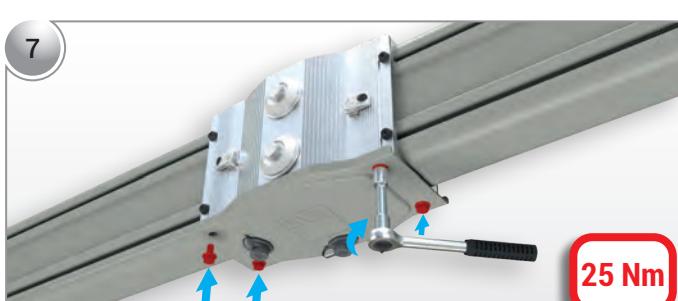

The adjacent busbar is assembled utilizing the alignment pins for correct orientation and alignment of parts.

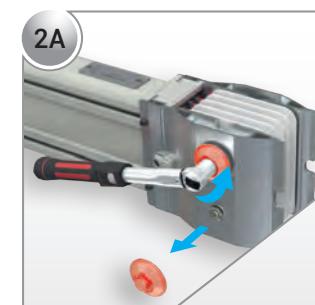

**Attention! Make sure that the conductors are dry and clean!**

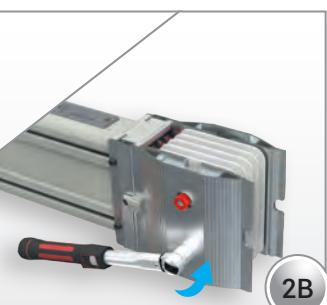

Confirm alignment of the busbar and the joint block.

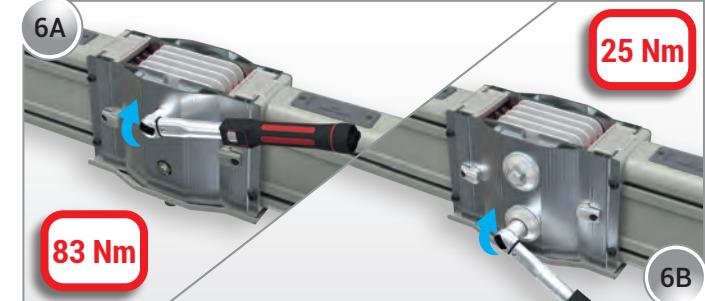

Install joint block cover. Torque bolts for both block joint cover plates to 25 Nm.

2A  
The dust cap bolt is removed and retained for later installation. The block joint bolts are loosened to prepare for installation of adjacent busbar.

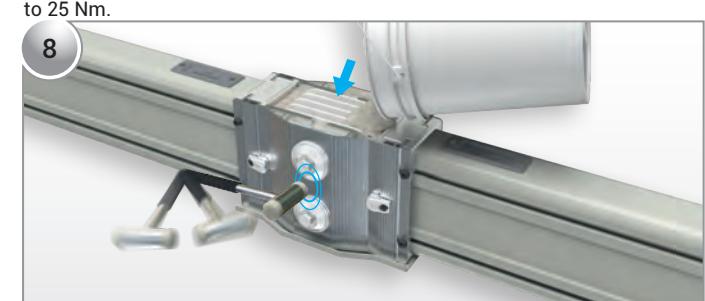

4  
Adjunct bolts are tightened after checking alignments.

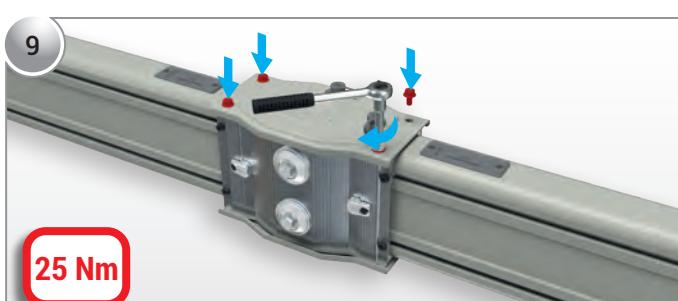

83 Nm

25 Nm

6A  
Tighten joint block bolts torque to 83 Nm. Install dust cap bolt and torque to 25 Nm.

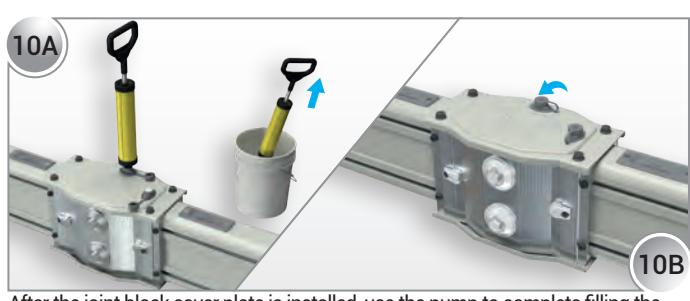

6B  
8  
Resin 4 is poured from a mixing bucket over the conductors from a single point as indicated above. Fill the joint till it reaches the top of the housing (do not let Resin 4 overflow over the sides). Prior to closing the joint, apply vibration with plastic hammer to the joint area to eliminate any air pockets from the pour. If Resin 4 settles after the air pockets have been removed, pour more Resin 4 till it reaches the top of the housing. Continue this process till no settlement is observed.

25 Nm

9  
Install joint block cover. Torque bolts for both block joint cover plates to 25 Nm.

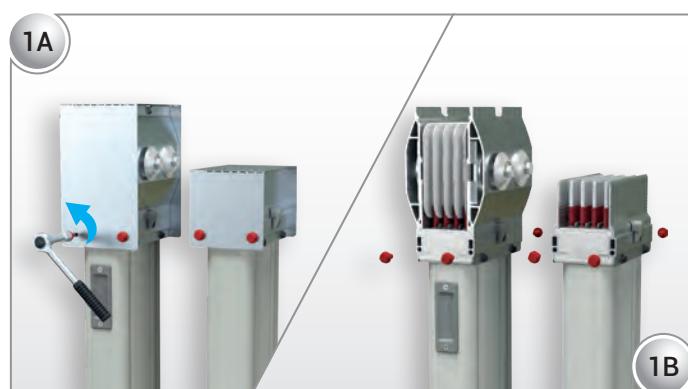

10B

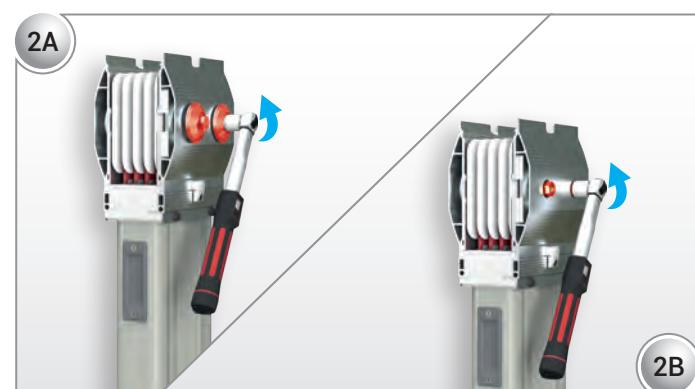

10A  
After the joint block cover plate is installed, use the pump to complete filling the joint. The injection process continues until the Resin 4 overflows from the other plastic fill port. Once the injection is finished and the plastic fill port cover is closed, the installation is complete.

# E-LINE CCR

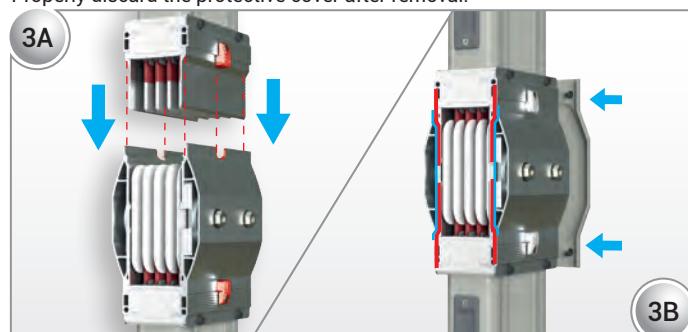

## ► Installation / Vertical

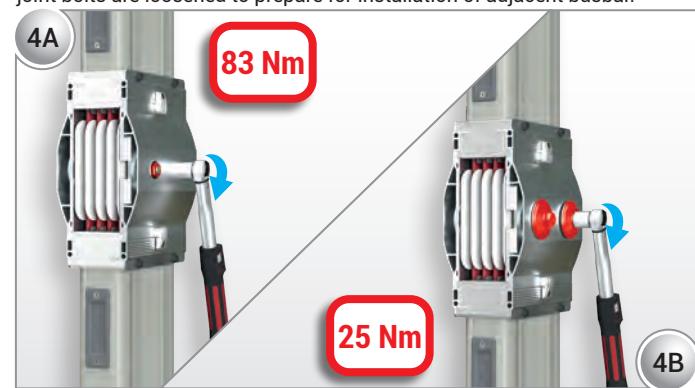

Unscrew the bolts and remove the busbar protection cover. Properly discard the protective cover after removal.

The dust cap bolt is removed and retained for later installation. The block joint bolts are loosened to prepare for installation of adjacent busbar.

The adjacent busbar is assembled utilizing the alignment pins for correct orientation and alignment of parts. Busbar is approach to alignment slots until it is perfectly seated. Adjunct bolts are tightened after checking alignments.

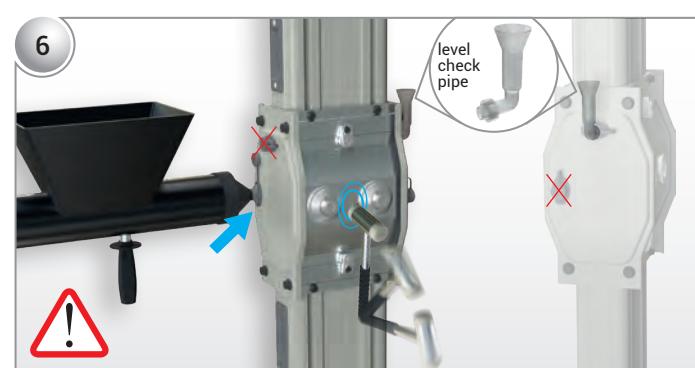

Tighten joint block bolts torque to 83 Nm. Install dust cap bolt and torque to 25 Nm.

Install joint block cover. Torque bolts for both block joint cover plates to 25 Nm.

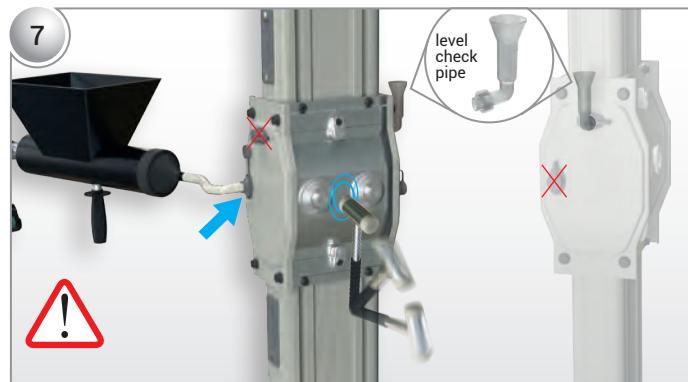

The fill port of the shown casting area is opened.

**Attention:** Depending on the orientation of the busbar, the filling process is carried out through the shown side plastic cover.

Install the level check pipe to opposite upper port. After level pipe is installed, proceed to injecting the Resin 4 into the joint. Continue the filling process until you see Resin 4 present inside the level pipe. If Resin 4 is present in the transparent pipe and no settlement is observed, that is an indication the joint is full and caps can be closed at this time.

**Attention:** Apply vibration with plastic hammer to the joint area to eliminate any air pockets from the pour. Allow for settlement of Resin 4 in the joint.

If there is not enough space for the casting apparatus, use the casting apparatus with transparent hose.

**Attention:** Apply vibration with plastic hammer to the joint area to eliminate any air pockets from the pour. Allow for settlement of Resin 4 in the joint.

Once the injection is done, plastic fill port is closed and installation is completed.

# CE DECLARATION OF CONFORMITY

## 600A...6300A COMPACT BUSBAR PRODUCT OVERVIEW (E-LINE CCR)

### 1- Standards & Certification:

-Busbar trunking system shall be designed, type tested and, manufactured in accordance with the International standard IEC 61439-6. Type test shall be documented by independent and internationally accredited testing and certification bodies. Short circuit type tests shall be conducted by independent and accredited testing and certification bodies. Short circuit type tests and the following 3 main type tests shall be conducted for each current rating of the busbar system and conformity to the standards certificates obtained.

### 2- General Structure Of The System

-The busbar system should be low impedance in accordance with the following characteristics. The tin coated conductors are arranged as a sandwich construction inside the resin body without any air gaps.

#### 2.1- Electrical Characteristics

-Busbar systems nominal insulation voltage shall be 1000V

-As per ampere rates, minimum short circuit values shall be as given below;

##### For Aluminium Conductors;

600A	: 1 sec/rms	25kA, peak	52,5kA
800-1250A	: 1 sec/rms	35kA, peak	73,5kA
1600A	: 1 sec/rms	60kA, peak	132kA
2000A	: 1 sec/rms	80kA, peak	176kA
2500A and above	: 1 sec/rms	100kA, peak	220kA

##### For Copper Conductors;

650-850A	: 1 sec/rms	35kA, peak	73,5kA
1000A	: 1 sec/rms	50kA, peak	105kA
1250-1600-2000A	: 1 sec/rms	80kA, peak	176kA
2500-3200A	: 1 sec/rms	100kA, peak	220kA
3400A and above	: 1 sec/rms	120kA, peak	264kA

### 2.2- Housing

-The housing of the busbar system shall be manufactured with specially developed cast material.

-The structure of the busbar lengths shall have conductors tin plated along their complete length within the housing.

-Multi-path busbars should be combined in a single body so that they are not separated from each other.

-Up and down, right-left turn elements, "T" and offset elements, panel, transformer and cable connectors, termination, horizontal and vertical expansion elements should be standard in the Busbar trunking system. Special modules and different lengths busbar ducts that may be required during the application of the project must be manufactured in a short time in accordance with standard specifications and technology.

-If busbar runs pass through the building expansion joint a horizontal expansion element shall be used in the run. In addition horizontal expansion elements should be used every 40 m along a horizontal run.

### 2.3- Conductors and Phase Configuration

-Compact busbar system shall have aluminium conductors between 600A – 5400A.

-Compact busbar system shall have copper conductors between 650A – 6300A.

-Busbar system shall have the following number of conductors and wire configuration.

- a) 3 Conductors
- b) 4 Conductors
- c) 4 ½ Conductors
- d) 5 Conductors

-Neutral conductor shall have the same cross section as the phase conductor cross section.

-Aluminium conductors shall be of EC grade aluminium. Minimum conductivity shall be 34m/mm<sup>2</sup>.Ω. All surfaces of aluminium conductors shall be tin plated.

-Copper conductors shall be minimum 99,95% electrolytic copper. Minimum conductivity shall be 56m/mm<sup>2</sup>.Ω. all surfaces of electrolytic copper conductors shall be tin plated.

### 2.4- Insulation

-Busbars shall be insulated using a mixture of specially selected silica and calcite mixed with an electrical grade epoxy resin to make a superior composite material. This insulation material must have a high impact resistance against external impacts.

### 2.5- Modular Joint Construction

-The busbar lengths must be joined together with the joint's point drawer type modular block joint system by placing the conductors in the conductive socket in the block insert. Joint block insulators should be high strength CTP insulators. The joint block's centre bolt should be tightened with a torque wrench set to 83 Nm (60 lb ft) after installation.

### 2.6- Protection

-Protection degree of the housing and joints shall be IP68.

### 3- Installation and Commisioning

-The installation of the busbar system should be done in accordance with the type and current values shown in these plans in accordance with the electrical project, electrical single line schemes, layout plans and detailed busbar application projects, the manufacturer's installation instructions must be observed carefully during the assembly process. The central joint's bolts must be tightened with the appropriate torque wrench and the nut side of the bolt must be secured with the nut locking cap.

-After installation of the busbar system the installation should be checked for compliance with the manufacturer's instructions and the requirements of the project, an insulation test should be done. Insulation resistance between all conductors and body has to be bigger than 1 megaohm.

A global presence across 100 countries:

**AFRICA**: Algeria, Egypt, Ghana, Kenya, Libya, Nigeria, South Africa, Sudan, Tanzania, Turkey, Uganda, Zambia.

**ASIA**: Bangladesh, China, India, Indonesia, Japan, Malaysia, Mongolia, Pakistan, Philippines, Singapore, South Korea, Sri Lanka, Thailand, Vietnam.

**MIDDLE EAST**: Bahrain, Cyprus, Iran, Israel, Jordan, Kuwait, Lebanon, Oman, Qatar, Saudi Arabia, United Arab Emirates, Yemen.

**EUROPE**: Austria, Belarus, Belgium, Bulgaria, Czech Republic, Denmark, France, Germany, Greece, Hungary, Italy, Malta, Poland, Portugal, Romania, Russia, Serbia, Slovakia, Spain, Sweden, Switzerland, Turkey, Ukraine, United Kingdom.

**AMERICAS**: Argentina, Brazil, Chile, Colombia, Costa Rica, Ecuador, Mexico, Peru, Uruguay, Venezuela.
